FIR Filtres Creation User Manual

User Manual – Version 1.0

FIR filter and applications

When user uses PEQ to adjust audio signal and set a linear magnitude, he can find the phase of signal changed, due to IIR filter. However, DSP products provide user a useful tool FIR filter to adjust audio signal with a linear phase.

Some calculation:

Frequency resolution = Sampling/Taps

Available min. frequency \approx Frequency resolution*3

Means when use adjust audio signal with 48kHz, 1024 taps, FIR filters will take effect in frequency above 141Hz of audio signal. The taps value more high, the FIR filter curve more steep.

FIR filter processing audio signal will produce a certain delay:

Delay = (1/Samplin	g Hz)*Taps/2	2	
Taps		48kHz	96kHz
·	Sampling		
256		2.67ms, LF 563Hz	1.33ms, LF 1125Hz
512		5.33ms, LF 279Hz	2.67ms, LF 558Hz
768		7.99ms, LF 188Hz	4.00ms, LF 375Hz
1024		10.67ms, LF 141Hz	5.33ms, LF 281Hz
2048		21.33ms, LF 70Hz	10.67ms, LF 141Hz

Applications:

- Linear of the phase curve of the speaker;
- Match the phase and magnitude of different speaker models within the same product line, as well as different speaker models in the installation project to make it easier to debug speaker groups and arrays;
- Dealing with linear array systems (for audience area coverage optimization);
- Frequency division optimization to improve the consistency of frequency response of multi-division speakers over their coverage Angle range.

Devices required:

Connection schematic diagram:

Using third party software to set FIR magnitude and phase

Step 1: measure phase curve of speaker in Smaart V7

Step 2: copy curve to ASCII in Smaart V7

Step 3: copy curve to software rePhase

"Import Measurement From Clipboard"

Step 4: adjust phase EQ or any other parameter in software, to match a linear phase for speaker

Step 5: export .txt file after setting

Marks:

- 1. Set taps in 2048/1024/768/512/256, here we set in 512.
- 2. Set rate in 48000Hz.
- 3. User can rename this file and find it easily.
- 4. Set directory for exporting file, such as C:/Users/User/Desktop.
- 5. Click "generate" to export a FIR .txt file.

Step 6: import FIR .txt file in FIR audio processor or DSP network power amplifier

Open Mconsole software, user can choose an input channel or output channel as needed, such as FIR in output channel, it will show a FIR function window.

Step 8: measure the curve of speaker again, use can find it become more linear.

After all setting, please remember to save a preset for your hard working in the speaker.
